DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1-14 are rejected under 35 U.S.C. 103(a) as being unpatentable over Volbrecht (4,934,831) in view of Blin (US 5183079).

In reference to claim 1.

A heater resistance for heating a solid part, the resistance

comprising: an electric wire within a tube; and a ceramic insulation surrounding the wire and interposed between the wire and the tube. Volbrecht does not disclose an additional ceramic sheath wherein the sheath includes a woven layer.

Blin discloses the use of a ceramic sleeve of woven character. It would have been obvious to modify the Volbrecht device to include a ceramic woven sleeve around the packed ceramic insulation in order to hold the ceramic insulation in place.

In reference to claim 5. A heater resistance according to claim 1, further comprising a mass of electrically insulating material, interposed between the wire and the sheath.

In reference to claim 6. A heater resistance according to claim 5, wherein the insulating mass is includes a mineral.

Application/Control Number: 10/562,372 Page 3

Art Unit: 3742

In reference to claims 2-4, 14, the choice of material is obvious to one of skill.

In reference to claim 7. A heater resistance according to claim 1, including a portion of generally elongate shape.

In reference to claim 8. A heater resistance according to claim 1, further comprising a connector and heater segment and a connection segment adjacent to the connector, the wire having a cross-section in the connection section of area that is greater than the area of the cross-section of the wire in the heater segment. See Figure 10

In reference to claim 9. A heater resistance according to claim 1, further comprising a connector and a portion adjacent to the connector that is tapering in shape. See Figure 10 In reference to claim 10. A probe mounted on board a vehicle for measuring an air flow parameter, including temperature, the probe comprising a body and at least one heater resistance-according to claim 1, the heater resistance being secured to the body.

In reference to claim 11. A probe according to claim 1, wherein the heater resistance is of a shape that is not plane.

In reference to claim 12. A probe according to claim 10, wherein the heater resistance extends at the outside of the body.

In reference to claim 13. A method of fabricating a probe for mounting on board a vehicle for measuring an air flow parameter including temperature, the method comprising deforming a heater resistance according to claim 1 in order to enable the heater resistance to be secured to a body of the probe.

Response to Arguments

Applicant's arguments with respect to claims 1-14 have been considered but are moot in view of the new ground(s) of rejection.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to /Thor S. Campbell/ whose telephone number is 571-272-4776. The examiner can normally be reached on Mon-Fri 5:30AM-2:00PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Tu Hoang can be reached on 571-272-4780. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
